### **Comfortable - Safe –Sanitary - Kennel Deck Flooring for your Dog**

Wednesday, November 11, 2009 Ephrata, PA --- Kennel Deck is a proven solution to the ongoing problem of providing a safe, sanitary, comfortable surface for dogs. Used nationwide in Federal applications, it is the perfect alternative to hard concrete floors in shelters, as well as commercial and boarding kennels.

Kennel Deck complies with Pennsylvania's 2009 dog flooring requirements.

It has been used for over 15 years. The unique high-density plastic resin construction allows for easy drainage and air circulation while maintaining a comfortable, flat, non-skid surface for a sanitary, safe, environment. Available in Pennsylvania exclusively through GoPet, Kennel Deck is an excellent choice for raising your dog. Studies have shown flooring such as dirt, concrete or a hard floor can contribute to disease or bone problems.

Kennel Deck withstands extreme temperatures and is easy to wipe down, hose or clean with disinfectant of your choice. Each section keeps the dog high and dry. It retains heat in winter and stays cool in summer. It is impervious to urine and feces and will not absorb odors. The resin material is chemical resistant and stands up to acid, bleach, salt, gasoline and oil. It will not splinter or flake and is resistant to mold, mildew, bacteria and insect life. The sections are relatively light weight at only 8 ½ pounds. Easy to lift for thorough cleaning and installation.

Standard 2 foot by 4 foot sections are easy to install. Clip them together for larger areas or cut with a hand saw for smaller sizes or irregular spaces. Simply lay in place. For larger areas or runways, Kennel Deck sections can be connected with clips provided at no extra cost.

Whether you need one panel for a crate or enough panels to surface a room, GoPet located in Ephrata Pa will help provide solutions to your dog housing needs. Ask for Kennel Deck.
